# **SOCIAL DISTANCING REIMAGINED SPACES**

**EMBRACING THE “NEW” NORMAL**

# REIMAGING THE WORKSPACE FOR SOCIAL DISTANCING

Social distancing has become one of the keys to ensuring safety during the COVID-19 pandemic. What exactly does that mean when it comes to your office or business? How do you ensure people remain 6 feet apart – both at their workstations and as they move around the facility? How do you protect people in public spaces like reception areas where they do need to interact with others?

Let Neu Concepts help you reimagine your space, finding solutions to all of these challenges. From protective barriers and moveable walls to directional signage, we can design and build solutions that allow you to safely bring your workforce and clients back into your space.

## INVITING, YET SEPARATED ENTRYWAYS

Your entry is the first opportunity to ensure safety while educating everyone about proper protocol. Some important components include:

- Reconfiguring lobbies and entries to include social distancing
- Special stations for temperature checks before people enter
- Adding plexiglass protective barriers to help maintain appropriate space
- Signage explaining social distancing protocols to be followed
- Floor markings to ensure a consistent traffic flow that allows for 6 feet of space

**Safely bring your workforce and clients back into your space.**

Each employee needs 36 sq ft of space

## REIMAGINED WORKSPACES

Adapting for lower density will be a primary goal for many offices. Maintaining 6 feet of distance means each person needs 36 square feet of space. Key aspects to address include:

- Retrofitting your current setup without compromising the overall design aesthetic
- Signage reinforcing office protocol on how to maintain a safe and healthy workspace
- Adding plexiglass barriers to extend existing office partitions
- Floor markings to provide visual cues for maintaining appropriate distance between workstations
- Moveable walls and directional signage to help direct traffic flow

## MORE OPEN PUBLIC SPACES

As most businesses look at reopening at a much lower capacity, finding ways to ensure adherence without physically removing all your furniture is key. Things to consider are:

- Wayfaring signage, including wall signage and floor graphics to ensure consistent traffic flow
- Information signage indicating procedures being used to ensure public safety within the business establishment
- Tabletop signage to indicate spaces that are not to be occupied
- Plexiglass protective barriers add an extra layer of separation and enable staff and visitors to feel safer and more secure

Let us help you reimagine your space.

## THE “NEW” NORMAL

Adding social distancing solutions into your place of business is about embracing the “new” normal. Let us help you make sure that “new” normal includes maintaining a stylish space that fits your organization’s culture and brand, while still allowing for human interaction.

## ABOUT NEU CONCEPTS

At Neu Concepts, we believe in the power of collaborative relationships with our clients and bring creativity and craftsmanship into every project. With a full array of fabrication, engineering and manufacturing services in-house, we can create spaces tailored to your specific needs.
